

**Mustang SC Air Quality Policy**

The Mustang soccer air quality policy serves as a guide for coaches and players about unsafe training and game playing conditions as it relates to the air quality. We will use the national standards as established by the EPA at [www.airnow.gov](http://www.airnow.gov)

The scale is as follows

Air Quality Index Levels of Health Concern	Numerical Value	Meaning
Good	0 to 50	Air quality is considered satisfactory, and air pollution poses little or no risk.
Moderate	51 to 100	Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.
Unhealthy for Sensitive Groups	101 to 150	Members of sensitive groups may experience health effects. The general public is not likely to be affected.
Unhealthy	151 to 200	Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects.
Very Unhealthy	201 to 300	Health alert: everyone may experience more serious health effects.
Hazardous	301 to 500	Health warnings of emergency conditions. The entire population is more likely to be affected.

Practices and games will continue at all times in the 0-100 range

Practices and games may be canceled for players under 10 years old when air quality is over 100.

Practices and games will be canceled for all ages when air quality is 150 or higher

Players who choose not to attend practices or games when the AQI is above 100 will not be penalized on a parents choice to keep their child home as the air quality becomes challenging for those groups sensitive to this level of Air Quality.
